Ritemark v1.4.0

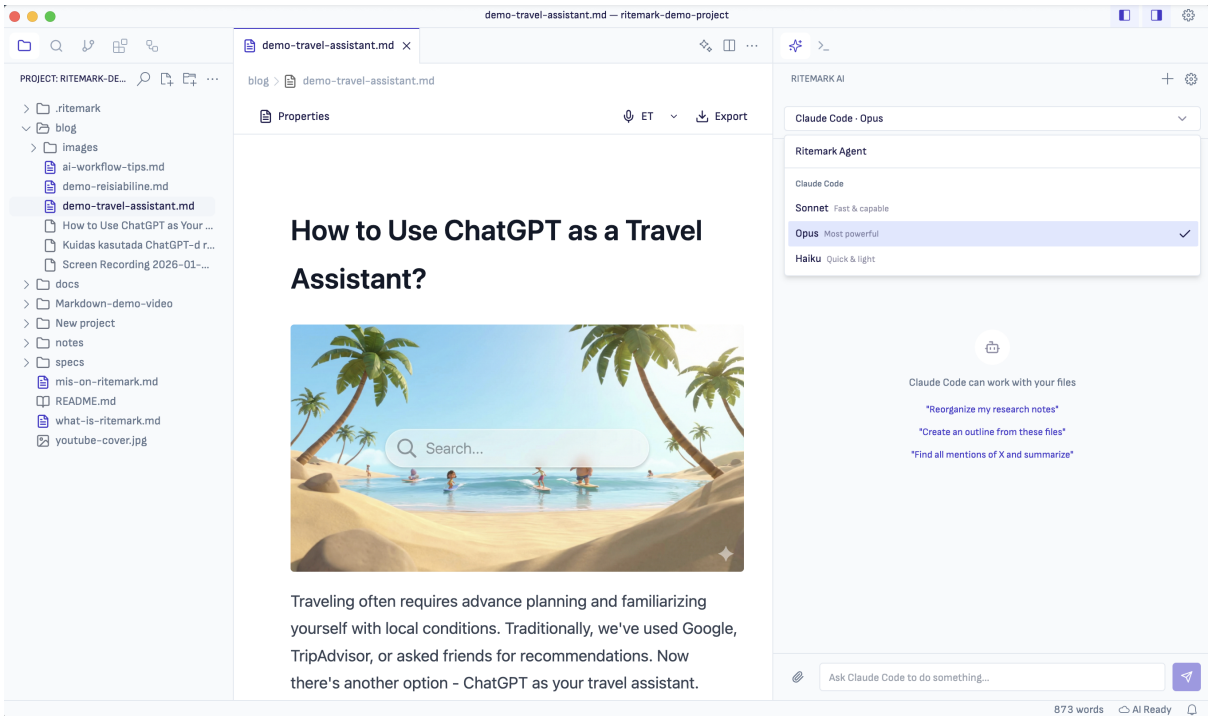
Released: 2026-02-14
Type: Major (agentic AI + visual refresh)
Download: GitHub Release

Highlights

Ritemark v1.4.0 brings autonomous AI assistance to your writing workflow. Claude Code can now read, edit, and organize your files directly from the sidebar — no terminal required. The release also includes a visual refresh with cleaner typography and a more writer-friendly aesthetic.

What's New

Claude Code Agent in AI Sidebar



The AI sidebar now supports a second agent mode: Claude Code. While the original Ritemark Agent helps with writing and research, Claude Code can perform autonomous file operations.

Why a custom UI for Claude Code?

We built a dedicated chat interface instead of using the terminal because:

- Easier setup: A guided wizard helps you install Claude Code CLI with visual feedback

- Non-technical friendly: Writers and researchers don't feel comfortable in the terminal
- Better context: The agent automatically sees your active document — no need to explain what file you're working on
- Visual feedback: Real-time activity feed shows what the agent is doing
- Approachable: Chat interface feels familiar and less intimidating than command-line tools

Features:

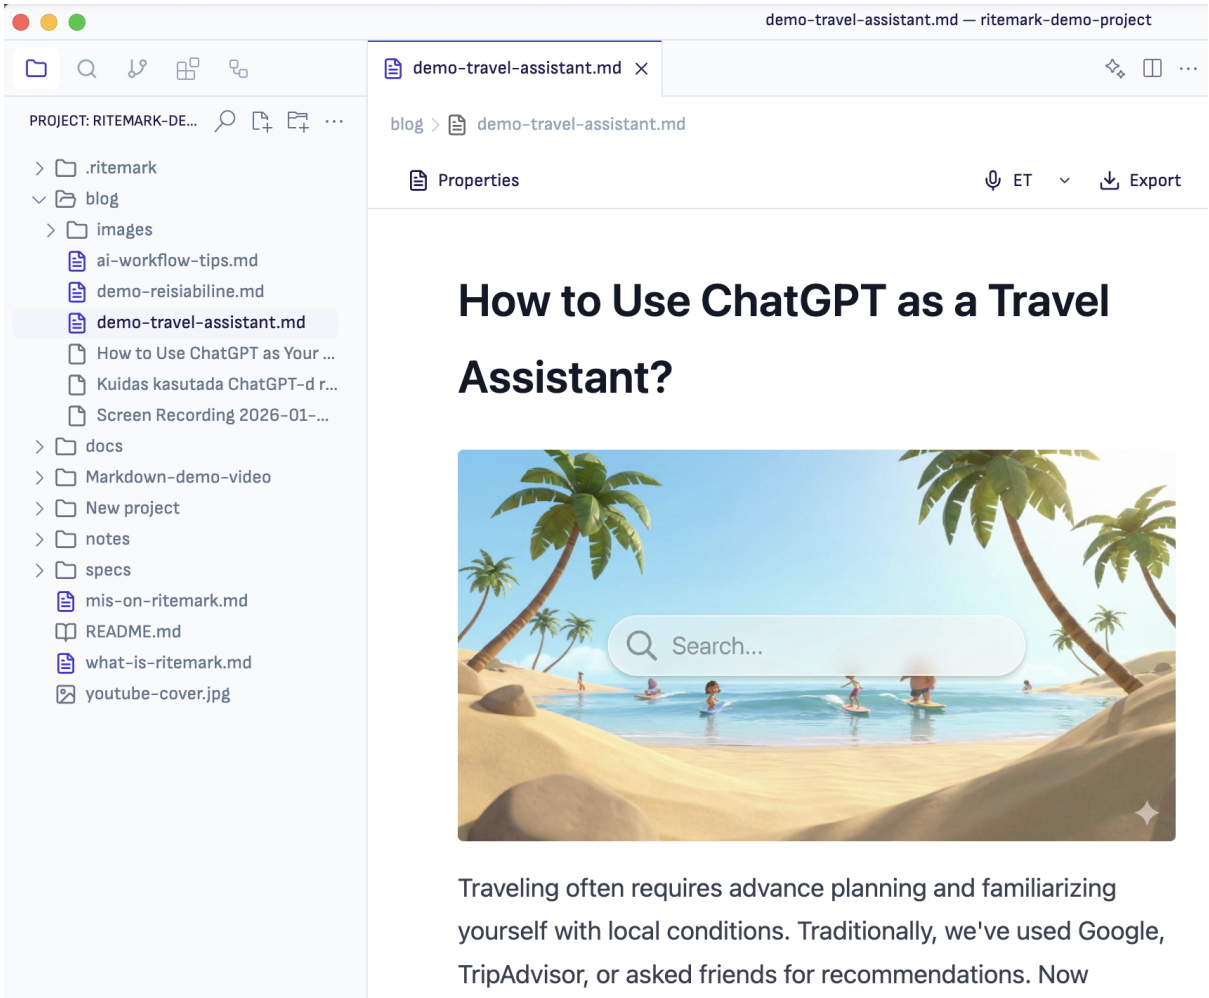
- Multi-turn sessions: Persistent conversations with fast follow-ups (~2-3s latency)
- Activity feed: Real-time visibility into what Claude is doing (reading files, writing, running commands)
- Image paste: Cmd+V screenshots directly into chat for visual context
- Clickable paths: File paths in responses are clickable — jump to any file mentioned
- Active file context: Agent automatically knows what file you're looking at
- Model selection: Choose Sonnet (fast), Opus (powerful), or Haiku (lightweight)
- Excluded folders: Set boundaries on what the agent can access

How to enable:

1. Open Settings (gear icon in sidebar)
2. Navigate to Ritemark Features
3. Enable "Agentic AI Assistant"
4. Select "Claude Code" in the agent dropdown

Requirements: Claude Code CLI must be installed. The setup wizard will guide you through installation when you first select Claude Code.

Refreshed Visual Design

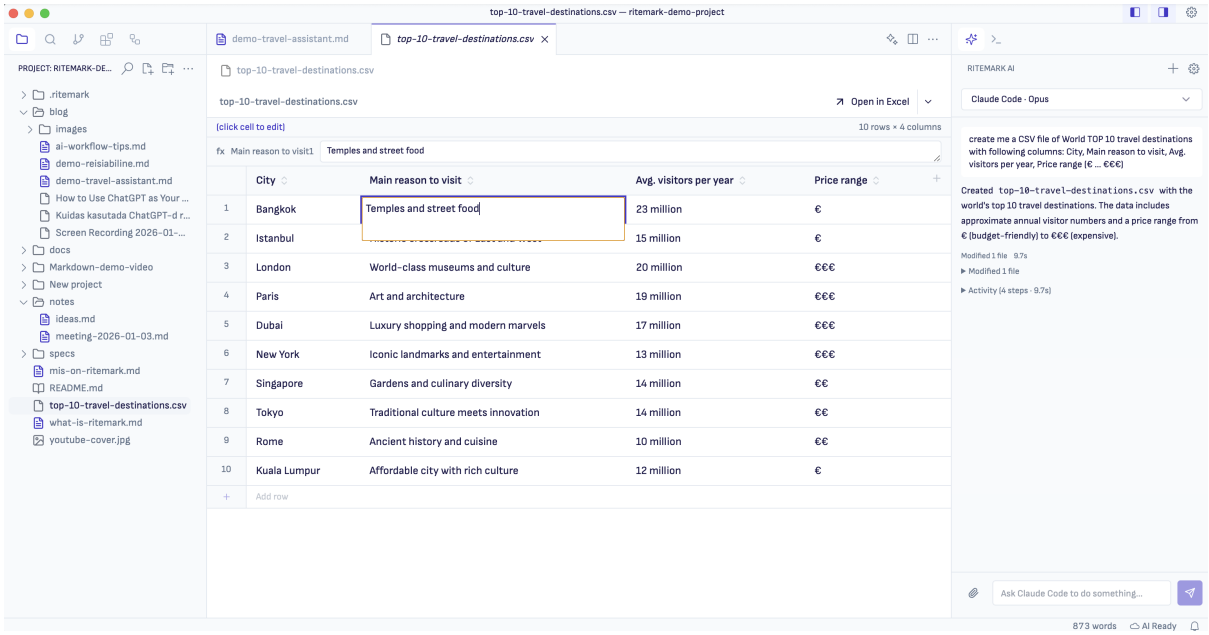


Ritemark now looks cleaner and more professional:

- Sofia Sans typography: A friendly, readable UI font replaces the default system font
- Refined colors: Softer grays, consistent indigo accents, better contrast
- Horizontal sidebar tabs: The activity bar is now a horizontal tab bar at the top of the sidebar to make you more room for writing.
- Smaller breadcrumbs: More vertical space for your documents
- Harmonized icons: Consistent icon styling throughout

These changes make Ritemark feel less like a code editor and more like a writing app.

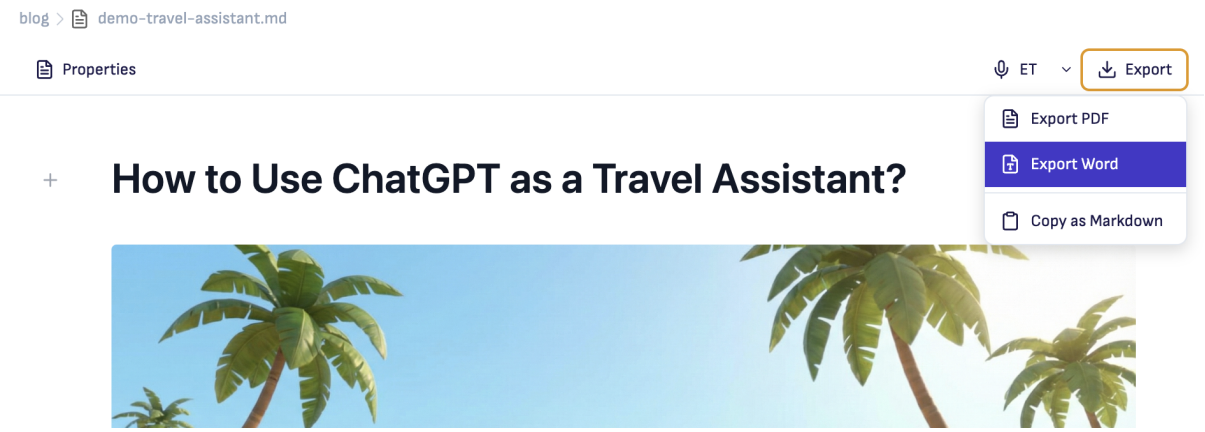
Improved CSV Editing



The spreadsheet experience is now closer to Excel:

- Full-text editing: See the entire cell contents while editing (no more truncation)
- Clear active cell: Excel-like blue border on the selected cell
- Column operations: Add, rename, and delete columns via header interactions
- Copy-paste: Cmd+C copies cell content, Cmd+V pastes
- Better keyboard navigation: Enter commits edits, Esc cancels, Tab moves to next cell

Export Improvements



PDF and Word export quality improvements:

- PDF images work: Images now render correctly (was broken in v1.3.x)
- Word images: Proper aspect ratio calculation for embedded images
- PDF heading spacing: Consistent spacing with orphan protection (headings stay with content)
- PDF blockquotes: Left border styling for visual distinction
- Simpler export menu: Removed confusing template options

Bug Fixes

- Cmd+B works for Bold: No longer conflicts with sidebar toggle
- Terminal only opens when needed: Stops auto-opening on every window
- Toolbar refresh: Spreadsheet toolbar updates correctly after operations

Breaking Changes

None. All existing features work as before.

Known Limitations

Claude Code Agent

- Experimental feature: Must be explicitly enabled in Settings
- Requires CLI: Claude Code CLI must be installed (claude --version to check)
- Folder permissions: Agent respects excluded folders setting but cannot yet show a visual picker

Visual Changes

- Font rendering: Sofia Sans may render differently across macOS versions (tested on macOS 11-15)
- Theme override: Custom themes may conflict with new color tokens

Technical Notes

New VS Code Patches

Seven new patches customize the VS Code workbench:

Patch	Purpose
015	Font and typography (Sofia Sans)
016	Sidebar top tabs layout
017	Titlebar controls
018	Explorer UI refinements
019	Right sidebar styling
020	Icon harmonization
021	Breadcrumbs ribbon

AgentRunner Architecture

The Claude Code integration uses a streaming input pattern for fast multi-turn conversations:

- Persistent process across conversation turns
- AsyncGenerator yields messages on demand
- Turn tracking prevents stale results after interrupt
- Workspace-scoped permissions via excluded folders config

Feature Flags

Flag	Status	Description
agentic-assistant	Experimental	Claude Code agent in sidebar
ritemark-flows	Stable	Visual workflow automation
voice-dictation	Experimental	Voice input (macOS only)

Upgrade Notes

macOS:

1. Download Ritemark-arm64.dmg (Apple Silicon) or Ritemark-x64.dmg (Intel)
2. Open the DMG and drag to Applications (replace existing)
3. Launch Ritemark

Windows:

1. Download Ritemark-1.4.0-win32-x64-setup.exe
2. Run the installer (will upgrade existing installation)
3. Launch Ritemark

Your documents, settings, Flows, and RAG index are preserved.

What's Next

- Setup wizard: Guided Claude Code CLI installation
- Research tool: RAG-powered search for Claude Code agent
- Folder permissions UI: Visual picker for agent access boundaries
- Checkpoint system: Undo/redo for agent file modifications
